

Digital Literacy Network™ ...transforming the global digital community

The Digital Literacy Network (DLN) is an open membership organization of business, government, academic and not-for profit interests aligned to support community development through the expansion of digital literacy and the improvement of broadband access.

Recent studies show that many urban and rural residents have not embraced broadband and digital technology due to issues related to cost, training, or perceived irrelevance to their daily lives. To address these issues the Digital Literacy Network (DLN) provides a global platform of digital excellence supported by outreach, education, and the application of 21st Century technology to traditional community development strategies.

An information resource for organizations interested in expanding broadband adoption and digital literacy within local communities, the DLN showcases programs, strategies and the unique visions of thought leaders in this unique area referred to as Digital Community Development.

A research and development platform for the Chatham Technical Institute's Digital Literacy Fundamentals™ training materials, the DLN reviews digital literacy and broadband access programs, products and service providers to identify 'best-in-class' attributes in various categories for its members. The DLN provides free, independent program consultation to member organizations upon request.

To become a member of the Digital Literacy Network and receive or submit information on development activities related to your business or organization contact us today!

The Digital Literacy Network is a trademarked program managed by the Chatham Technical Institute, a nonprofit research and development corporation with interests in the design and management of economically viable, socially responsible and environmentally sound community-based programs that connect underserved communities to mainstream economies.
